### Analysis

#### BUILD:

Pre-order

You create the node and then send out to the left and right child.

#### EXPRESSION:

In-order

Get to the left child, print, then find the operator, print, then print the right child.

#### EVALUATE:

Pre-order

Get the operand (if applicable), return left, then right and apply operation.

#### CLEAR:

Post-order

Iterate to the bottom of the tree delete children, then delete parent node.
